            <div class="alert-badge">BREAKING NEWS</div>

            <h1>View Transitions Arrive, ----- But Cookies Crumble</h1>

            

            <p class="article-text">
                <strong>DECEMBER 3, 2025</strong> – The web platform has achieved a significant
aesthetic victory this quarter. The <em>View Transitions API</em> is now fully supported across
all major engines, allowing for app-like morphing animations between page loads without the need
for Single Page Application (SPA) architecture. This marks the end of the "white flash" era of
the internet, a development celebrated by UX designers globally.
            </p>

            <p class="article-text">
                However, the landscape is not entirely optimistic. The industry is currently
grappling with the chaotic deprecation of third-party cookies. While the "Privacy Sandbox" was
intended to be the successor, implementation delays and regulatory pushback have left
advertisers and developers in a state of limbo. Many sites are reporting broken authentication
flows as a collateral result of these privacy enforcement updates.
            </p>

            <p class="article-text">
                Furthermore, "Framework Fatigue" has returned as a primary complaint in the 2025
Developer Survey. With the rise of "Resumability" frameworks challenging the React hegemony,
engineering teams are facing difficult decisions regarding technical debt and migration paths.
The dream of a unified web standard remains elusive as tooling fragmentation hits an all-time
high.
            </p>

```

<aside>
  <h3>Prevailing Setbacks</h3>
  <ul>
    <li><strong>Hydration Costs:</strong> Mobile CPU usage remains too high on
initial load.</li>
    <li><strong>Safari Flexbox Bugs:</strong> New layout regressions reported in iOS
19.</li>
    <li><strong>WASM Debugging:</strong> Source maps for WebAssembly still lack
granularity.</li>
    <li><strong>Accessibility:</strong> ARIA support for AI-generated UI components
is failing validation tests.</li>
  </ul>
